# What is the NattCup?

## Description

A "NattCup" is a type of tournament designed to foster team spirit both within individual teams and between teams. When it was first held, matches took place from 8 PM to 8 AM (with some time for sleep in between)—hence the name. Unlike a standard tournament that tracks wins, points, and goal difference, this tournament counts the number of minutes played on the pitch. If the number of minutes is tied, the total number of goals scored throughout the tournament serves as the tiebreaker. Simply put, the tournament works as follows:

- The list of all the teams undergoes a random sort, and the first two teams start on the court.
- The teams play the scheduled minutes, and both teams have the number of minutes played and goals scored recorded.
- The winner remains on the court as the home team, and the first team on the list moves up as the away team.
- If the teams playing the match draw, both teams leave the field and the top two teams on the list play the next match. The home team is added to the list before the away team.
- If the team that won the match has played three consecutive matches, both teams involved must leave the field just as they would in the event of a draw, except that the away team is added to the list before the home team.
- Once the total playing time for the entire tournament has been completed, the winner is the team with the most minutes on the pitch. If two teams have the same number of minutes, the team with the most goals scored wins. If the number of goals scored is also tied, the teams will share the position on the list.

# Rules

## RULES OF THE GAME

The standard rules of handball apply with the exception of:

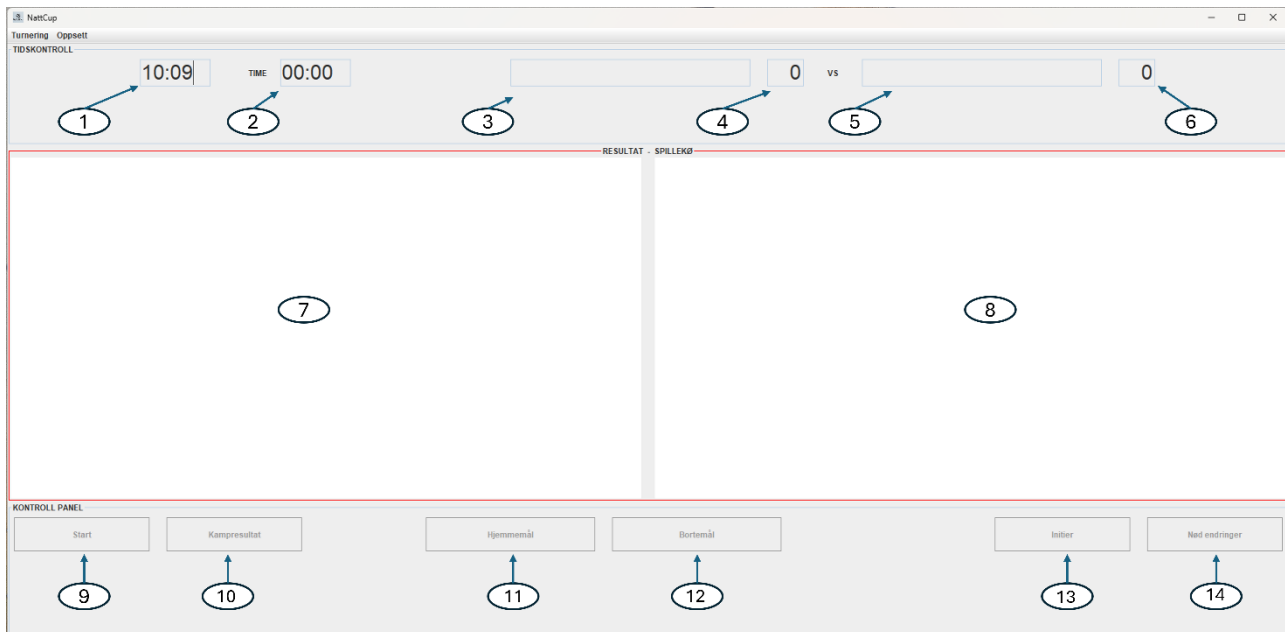

- If the match duration is set at less than 7 minutes, a 2-minute suspension will not require the player to leave the field of play; instead, the player must sit out the next match. The team may still field a full squad during the match from which the player is suspended.
- Rules regarding time-outs and added time do not apply.
- The match is started and stopped by the match secretariat.

## CUP RULES

- Before the tournament starts, the duration of the tournament must be set.
- The tournament concludes when the scheduled time expires. If there is insufficient time for a full match before the deadline, play must end early, provided the remaining time does not exceed half the duration of a match. If the remaining time exceeds this limit, the match must be played to completion, even if it extends beyond the scheduled end time.
- The winner of the cup is the team that has spent the most minutes on the pitch.
- If 2 teams have the same number of minutes on the field, the team with the most goals scored shall be the winner.
- If teams are tied on minutes and goals, the victory shall be shared.
- The matches should last between 5 and 10 minutes, depending on the number of participating teams.
- In the event of injuries or similar incidents, the clock will continue to run, and playing time will be recorded for both teams.
- The winner of a match remains on the court as the home team, while the team at the top of the list becomes the away team. The losing team is placed at the back of the rotation. In the event of a draw, both teams leave the court, and the two teams at the front of the rotation play the next match.
- A team can only play 3 consecutive matches. After 3 matches, the team is placed at the bottom of the match list.

# Software overview

The NattCup software is designed to manage a tournament and includes built-in rule set management and results reporting.

- 1) Real-time clock that can be used for the total time of the cup competition.
- 2) Match duration (countdown)
- 3) Name of home team
- 4) Home team goals
- 5) Away team name
- 6) Away team goals
- 7) Ranking list results
- 8) List of player order
- 9) Start match.
- 10) Record result (triggers the scheduling of the next match)
- 11) Record home team goal.
- 12) Record away team goal.
- 13) Initiating the tournament and setting up the first match
- 14) Emergency editing if errors are detected.

# Running a tournament using the software

## REGISTRATION AND SETUP

When the software starts, the only active components visible on the screen are the menus. To start a new tournament, first open the "Tournaments" drop-down menu and select "Create." This will initialize (reset) the system. Next, you must register the teams. Do this by selecting the "Setup" drop-down menu and then "Teams." Enter the team name and click the "Add team" button. Repeat this process until all teams have been registered. The teams will appear in the match list (8). Once the teams are registered, you must set the timing details. Use the "Setup" drop-down menu and select "Time." In the dialog box that appears, enter the total duration of the tournament (in hours) and the duration of each match (in minutes). After completing the setup, it is recommended to save the tournament using "Tournament" and "Save" (note that this resets the tournament, so it must be reopened using "Tournament" and "Open").

## LAUNCHING THE CUP

When opening a tournament via the "Tournament" and "Open" options, the list of teams in the match schedule (8) appears. At the same time, the "Init" button becomes active. Pressing this button prepares the tournament for the start. This action randomly sorts the list of teams, and the teams appearing first are assigned to the home team (3) and away team (5) slots. The fields for home goals (4) and away goals (6) are reset, and the match duration is displayed in the match time field (2). The "Start" button (9) becomes active, and the "Init" button is deactivated.

## START OF A MATCH

To start the match, press the "Start" button (9). The buttons for recording home goals (11) and away goals (12) become active, and the "Start" button becomes inactive. The game time begins to count down. ***Note: Once a match has started, it cannot be stopped.***

## CONDUCTING THE MATCH

Once a match has started, it cannot be stopped. Time-outs and similar interruptions are therefore not permitted. In the event of an injury, the clock continues to run, and the playing time is recorded against the teams. When the match ends (playing time reaches 00:00), the goal-registration buttons are automatically disabled, and the "Register result" button (10) is activated.

## RECORD RESULT

The "Record result" button (10) has several functions. When pressed, the match result for the teams is updated, and a results list is generated and displayed in the results list field (7). Additionally, a new match is initiated according to the tournament rules, and the corresponding fields are populated (see "Initiating the tournament"). The "Record result" function is deactivated, and the button to start a match is reactivated.

# Software Setup

The software supports translation into multiple languages. By default, it is available in Norwegian and English. To change the language, move the files from the language path to the config path and remove the "en\_" or "no\_" prefix. The software can also be translated into other languages by translating the contents of the "en\_" file into the target language and placing the file in the config path. No further configuration should be required.

***Note:** The startup file is designed for a Windows environment; if you intend to use the software on another platform capable of running Java, you may need to modify the file to suit that system.*
